**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by EP 0,754,553. EP'553 discloses (see column 9, lines 12-41, column 23, lines 42-52, Figs 11, 16, 21, 24, an apparatus for making a color filter comprising a plurality of inkjet heads (120a, 120b, 120c) comprising a plurality of nozzle groups including a plurality of nozzles, an ink supplying element (ink supply side of the heads), a first –scan driving element for moving at least one of the inkjet head and the substrate in a first-scanning direction (X-direction moving means, driving motor 56, moving the relative positions of the heads and the substrate), a second –scan driving element for moving at least one of the inkjet head and the substrate in a second-scanning direction(Y-direction moving means, driving motor 58, moving the relative positions of the heads and the substrate), a nozzle discharge controlling element and a first-scan and a second-scan controlling elements (control means for controlling an operation of the moving means and ink discharging operations of the plurality of inkjet heads) wherein the inkjet heads and the substrate is moved in relation to each other. Furthermore, with the use of a control unit (CPU 50), the EP '553 device scans a same section of the substrate in the first direction (see Fig 24 scanning operations, wherein scan 1, scan 2 and scan 3 having overlapping

same sections). The EP'553 device is also capable of making a liquid crystal device or an electro-luminescent device or an optical component having a plurality of color patterns or discharging a material towards an object.

### ***Response to Arguments***

3. Applicant's arguments regarding the art rejections filed on 11/02/2004 and 11/26/2004 have been fully considered but they are not persuasive. The examiner maintains the 102 rejections because EP'553 meets the claimed invention (see above). Although EP'553 does not disclose (see columns 31-32, lines 36-56 and 1-17 respectively) the group of nozzles (for instance a nozzle 202) is moved to discharge ink between the first scan and the second scan, the operation of scanning same sections is illustrated in Fig 24 (see the overlapped sections of the scans). As such, the requirement of the controlling element configured to control the driving element to move at least one of the inkjet and the substrate so that part of the nozzle group scan a same section of the substrate has been met by the reference EP'553. As to the 112 2<sup>nd</sup> paragraph rejection, examiner withdraws the rejection.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Art Unit: 1734

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
